

## The Street Acrobats – climbing elements in imaginative sloping positions

The Street Acrobats are open cube-shaped elements that children love to hide in and climb. The sloping structure is what makes it so special: Cubes and beam connections form an angle of 45 degrees to the ground creating an appealing and unconventional design. The niches convey comfort and security and offer enough space for imaginative role-playing games. The children can clamber up the structure via a climbing trunk and a connecting bridge element and have fun swinging down the bent firemen's pole. The play equipment (Design: B. Poth-Lengefeld) encourages active play such as climbing, sliding and balancing and promotes imaginative role-playing games.

The Street Acrobats are suitable for children from the age of three. In addition to public playgrounds, they are also ideal for other play locations such as playgrounds situated near houses, nurseries, children's homes, and primary schools.
