Bell Climbing Poles: a sense of achievement that promotes self-confidence

A sense of achievement increases the sense of self-worth! That's the reason why climbing equipment is so frequently used as a means to test and measure capabilities – either alone or in competition with others. More than any other kind of exercise, climbing stimulates self-perception, promotes the ability to make decisions and supports concentration, trains spatial perception and strengthens self-confidence. Young people in particular continuously seek out situations that allow them to measure and compare their abilities to one another or increase their own performance level.

Here, the Bell Climbing Poles offer a very special kind of motivation: The reward for climbing is "audible" and signalled by the ringing of a bell at the top when it is tapped. The rubber-attenuated foundation, which enables the free-standing poles to swing, is an additional stimulation offered by this unusual looking installation. The Bell Climbing Poles are particularly well suited for public playgrounds, school playgrounds, open-air swimming pools, parks and institutions for young people.
