

## The Caterpillar – a modular play system for small playgrounds

Even smaller playgrounds can be provided with a comprehensive range of play options without overloading the space. With its slim wooden body, the caterpillar is both elegant and robust. Its attractive and harmonious appearance with numerous pieces of play equipment is an appealing offer for smaller children. Alongside many different sand play elements, such as sand shovels, sand tippers, sieves, turntables, baking tables and sand channels, there are coloured viewing windows, little bells, a marble run, visually revolving discs, access hatches, sun sails and offers for role-playing games.

The single wall elements can be flexibly combined with one another, while the angle at which the individual elements are placed and their arrangement and order enable you to plan an individual play offer to suit your needs.

Numerous variations can be created this way: for example with revolving discs or a marble run, with a sand see-saw or turntable, sun sail or sand sieve, baking table or kitchen. The latter can be installed with a water connection via a garden hose. The space partitions promote communicative play, but also make it possible to create borders and divide up the play areas, which, thanks to the modular play system, harmoniously blend in with the layout of the grounds.
